

SUSTAINABILITY AT ACCENTURE ANZ

VIDEO TRANSCRIPT

I've always been passionate about the environment

From an early age, I remember going to climate rallies with my mum, protesting for change

I've never been one to sit back and do nothing which is why I joined Accenture's Sustainability Squad to help build a sustainable future

The science tells us time is running out

The climate crisis is on our doorstep and we need to take action now

We are taking decisive action to reduce our environmental impact and to enhance our contribution to a more sustainable and thriving world. By 2025, our goal is to achieve net zero emissions by focusing first on actual reductions and investing in nature-based solutions such as tree planting to remove carbon from the atmosphere.

We're moving to zero waste by recycling 100% of our e-waste and office furniture.

Finally, we're looking to remove all single-use plastics from our operation, post COVID.

These global goals are being translated into local action by our ANZ Environment Program and we're making progress on all fronts to deliver on our commitments.

We're making sustainability our responsibility not just because it's the right thing to do but because we believe it will be the most powerful force for change in our generation.

And this change is creating opportunity. Opportunities for Hannah and our Sustainability Squad to combine their strengths and their passions at work and in our communities.

For Jose and our corporate team, they're already busy putting our sites on the green power like here in sunny Melbourne.

And by 2023 all our sites will be on renewable energy and our greatest exponential opportunity is how we're going to take sustainability and work with our clients to help them thrive. And it's all part of 360 value we're delivering for our clients, our people and our community.

I'm so proud to work for a company that takes the climate crisis seriously. It's real action, real goals and real change. We all have the power to act for change.

Let there be change.
